## **DID YOU KNOW?**

### ***Student Portal***

The full-service Student Portal provides you with access to your academic administrative information, including:

- an online calendar,
- timetable,
- academic results,
- module content,
- financial account, and so much more!

### ***Module Guides or Module Manuals***

When you log into the Student Portal, the 'Module Information' page displays the 'Module Purpose' and 'Textbook Information' including the online 'Module Guides or 'Module Manuals' and assignments for each module for which you are registered.

### ***Supplementary Materials***

For certain modules, electronic supplementary material is available to you via the 'Supplementary Module Material' link.

### ***Module Discussion Forum***

The 'Module Discussion Forum' may be used by your lecturer to discuss any topics with you related to any supplementary materials and activities such as ICE, etc.

**To view, print and annotate these related PDF documents, download Adobe Reader at following link below:**

# 1. Introduction

An essential part of The Independent Institute of Education (The IIE) qualifications is to prepare students for the World of Work. The key differences between WIL modules and all other modules in a qualification is that, in the WIL module, you need to use all the knowledge and skills that you have developed in all your modules up to that point and further develop your abilities to reflect on yourself and your peers.

## 2. The Purpose of WIL

The purpose of having a WIL module in a qualification is to bring together all the knowledge and skills gained into one consolidated project thereby enabling you, the student, to integrate what you have learnt in several modules and demonstrate that you are able to apply it to solve a workplace type problem. Through the WIL Modules additional attention can be given to what SAQA calls Critical Crossfield Outcomes (CCFOs) or what is now more generally known internationally as global competencies.

- CCFO1:** Identify and solve problems in which responses demonstrate that responsible decisions using critical and creative thinking have been made.
- CCFO2:** Work effectively with others as a member of a team, group, organisation, community.
- CCFO3:** Organise and manage oneself and one's activities responsibly and effectively.
- CCFO4:** Collect, analyse, organise and critically evaluate information.
- CCFO5:** Communicate effectively using visual, mathematical and/or language skills in the modes of oral and/or written presentation.
- CCFO6:** Use science and technology effectively and critically, showing responsibility towards the environment and health of others.
- CCFO7:** Demonstrate an understanding of the world as a set of related systems by recognising that problem-solving contexts do not exist in isolation.
- CCFO8:** In order to contribute to the full personal development of each learner and the social and economic development of the society at large, it must be the underlying intention of any programme of learning to make an individual aware of the importance of:
  - reflecting on and exploring a variety of strategies to learn more effectively.
  - participating as responsible citizens in the life of local, national and global communities.
  - being culturally and aesthetically sensitive across a range of social contexts.
  - exploring education and career opportunities; and
  - developing entrepreneurial opportunities.

The application of CCFOs or global competencies is largely context and discipline dependent.

## 3. Assessment of WIL

Assessment of Work-Integrated Learning (WIL) should be based on the design of the learning component of the programme, expectations, and stated outcomes. In addition, the assessment of WIL is governed by the principles in The IIE Assessment Strategy and Policy (IIE009).

Attendance of the weekly collaborative sessions with the lecturer and with your group is required. For distance students, your participation will be done using Microsoft Teams or Zoom.

### 3.1 WIL Project

Your WIL project will consist of a collection of reports, evidence and materials that illustrate your skills and capabilities. The project includes reflecting on the learning process for one or both of the following purposes:

- To demonstrate student competence during a WIL process by putting together evidence of what they did, for example, documentation, background research, reflections, lessons learnt, etc. This would include all types of WIL e.g. Project, Simulation, Work Placement.
- To keep in one place, some of the documents students may wish to show a potential employer as evidence of their learning.

There are three (3) submissions for the WIL. Task 1, Task 2 and the final Project. Each of these submissions are weighted differently and must be done on Arc.

Your submissions can include Microsoft 365 Office documents such as Visio, Project, PowerPoint, Excel and Word. The final submission of the portfolio will be after the 12<sup>th</sup> week in the semester – normally in week 13. Submission of the portfolio is done on Arc.

### 3.2 Peer/Self-Evaluations

Because reflection is such an important part of the WIL modules, students will be assessed on their reflections and insights gained while engaging in work-like activities. Students will be assessed both on their ability to reflect on themselves (called a “self-learning evaluation”) and on their ability to evaluate other students, or their peers (called a “peer evaluation”) in the group. All the self-learning evaluations and peer evaluations will be standardised across all the WIL modules and will be weighted differently across the various years in a three-year qualification. The students are to complete the peer evaluation questionnaire (Annexure B) and the self-evaluation reflective report (Annexure C).

### 3.3 Presentations

All WIL modules require students to deliver a presentation describing their project or activity to their peers and/or lecturer(s). This will typically happen at the end of the project, i.e., towards the end of the WIL module. Each student in the group is to be evaluated according to the presentation rubric (Annexure F).

The presentation for contact students can be done in front of the lecturer and peers, and for distance students, the presentation will be done over Zoom or Microsoft Teams. There are two main components of presentations, namely, a verbal component and a visual component. The **verbal** component focuses on the oral, or spoken, portion of the presentation during which aspects such as tone, delivery, language, and audience engagement are assessed.

The **visual** component includes all other communication aids that are used during the presentation, e.g., slides, video clips, posters, handouts, models, simulations, diagrams, websites, etc. The visual images created by the students themselves may be included here if they are relevant to the environment that is being represented. A typical example would be when a group of students are discussing the presentation of a proposal to a prospective client. Visual aids used in presentations should be used effectively. For example, PowerPoint slides should **support** the presentation but not **become** the presentation. Consequently, students need to think about both what they say, how they say it, what they use to support what they say, and how they are acting professionally and appropriately in a work-like environment.

### 3.4 WIL Role Players

WIL involves the following role players:

1. The **student** – the student is expected to attend all scheduled sessions (in person or in the case of distance students remotely), to meet deadlines, and collect and prepare evidence aligned to expectations as set out in the relevant WIL Module Manual. If a letter is required to contact stakeholders from the industry, the student must request such letters from the WIL Coordinator.
2. The **WIL Coordinator** – takes responsibility for the overall operationalisation of WIL on a campus or for a group of students and issues any formal letters required by the student.
3. IIE approved **lecturers** – designated to guide, mentor, assess and monitor students' academic progress in the WIL module.

A lecturer responsible for a WIL module may also be the designated WIL Coordinator.

## 4. Qualification Summary

Qualification Name: Diploma in IT in Software Development

Qualification Code: DISD0601

| QUALIFICATION PURPOSE                                                                                                                                                                                                                                                                                                                                                                                                      | EXIT LEVEL OUTCOMES                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| The purpose of this qualification is to produce software developers with a variety of skills in different programming paradigms including, in particular, creative, critical thinking and problem-solving skills. Students will develop sound knowledge of programming in the desktop mobile and web environment. The programme includes different programming languages as well as system logic, architecture and design. | <p>ELO01. Demonstrate applied competence in the analysis and design of software solutions to meet specific business requirements.</p> <p>ELO02. Integrate programming, database and web development techniques in creating applications for a business environment.</p> <p>ELO03. Demonstrate an ability to use a variety of programming tools and techniques to develop secure computer applications for a business.</p> <p>ELO04. Apply generally accepted coding best practice in the development of secure software solutions.</p> <p>ELO05. Test and quality assure software applications.</p> |

| <b>Module Purpose</b>        | The purpose of this module requires the students to integrate their acquired knowledge and skills to develop software applications that meet specific given business requirements for a given scenario.                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Module Outcomes</b>       | <p>Successful completion of this module requires students to:</p> <p>MO001: Identify software requirements for a new IT software system to meet given business requirements.</p> <p>MO002: Design the implementation plan to meet the pre-determined software requirements.</p> <p>MO003: Develop the deliverables identified in the implementation plan.</p> <p>MO004: Create comprehensive documentation for each required deliverable for the development and implementation of the new IT software system.</p> <p>MO005: Work together as a group to produce all deliverables of the new IT software system.</p> |
| <b>Credits</b>               | 15                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## 6. Pacer

It is important to communicate with your lecturer on the **progression** of your project during the collaboration sessions to ensure you are progressing in the right direction. Your lecturer can offer guidance and recommendations to improve on your project.

|------------------------------------------------|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Report                                         | Exam Week 2 | <u>GROUP</u> <ul style="list-style-type: none"> <li>• Merge the Project Plan, Requirement Analysis and System Design documents into ONE PDF document.</li> <li>• Must be a <u>single</u> submission – even though this is a group project, you are marked individually, and the submission points should be individual submissions. Each group member is to hand in individually.</li> <li>• In this individual submission, students should hand in their self and peer evaluations as well. Along with the group's PowerPoint presentation. (As stated below)</li> <li>• Any links used, such as GitHub or Figma, should be included in the document for the lecturer to access for marking.</li> </ul> |
| Presentation                                   | Exam Week 2 | <u>GROUP</u> <p>The group will present to the lecturers, peers, etc.</p> <ul style="list-style-type: none"> <li>• PowerPoint presentation of the WIL project. Include in the individual submission report. Other visual aids are welcome.</li> <li>• Demonstration of the applications.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                       |
| Self-Evaluation and Peer-Evaluation            | Exam Week 2 | <u>INDIVIDUAL</u> <p>Complete the peer and self-evaluation tasks. Include the documents in the individual submission report.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## 7. WIL Requirements

See Annexure D for task rubrics.

### Task 1 – Project Plan

- Introduction
- Milestones and deliverables
- Work breakdown structure
- Project Schedules (Gantt Chart)
- Risk Management
- Technical Feasibility
- Economic Feasibility
- Team Members
- Document Formatting
- Appendix if applicable

### Task 2 – Requirement Analysis and System Design

- Requirement Analysis - Problem Domain
- Solution Domain (Active actors, functions, passive actors)
- Logical System Model (Input specifications, output specifications, system processes\_
- Entity Relationship Tables
- Class Diagrams
- Appendix if applicable
- System Design - Introduction
- Logical Architectural Design (High-level design, low-level design)
- User Interaction Design (Input interactions, request interactions)
- Database Design (Database tables)
- ERD Design
- Report Design
- Appendix if applicable

## Project Report

- Combine the above 3 documents into one. Everything must be in ONE document. This is an individual hand in on ARC.
- See rubric below (Annexure D – Project Report).

### Submission should include:

- Cover Page.
- Table of Contents.
- Group name and a list of the team members.
- Any links to be included in the document, such as GitHub / Figma, etc.
- Project plan documentation.
- Requirement analysis documentation.
- System design documentation.
- Improvements should have been made to the above documentation based on lecturer's feedback for this final submission.
- Any screenshots from the project, if necessary.
- Annexures:
  1. Declaration of Authenticity (Annexure A).
  2. Peer evaluations (Annexure B). Penalties may be applied if the peer evaluations highlight an issue with a team member.
  3. Self-evaluation reflective report (Annexure C).
  4. Project Rubrics (Annexure D)
  5. PowerPoint presentation (Annexures E and F)

## Project Presentation Criteria

- Problem statement
  - How was the problem domain analysed and presented?
- Business solution
  - Description of the system
    - Architecture
  - How was it solved?
    - How was the solution domain presented?
    - Milestones and deliverables?
    - Work breakdown structure?
    - Budgets?

- User requirements
    - Identification of business functionalities?
- System Requirements Documentation
  - Value added?
    - How does it satisfy the needs of the client
  - Requirement Analysis documentation
- Database
  - Scope (number of tables)
  - Table correctness (fields/datatypes, etc.)
  - Relationships (ERD)
- System Prototype
  - Layout (aesthetics)
  - Friendliness
  - Menus/navigation
  - Functionality
- Presentation skills mark
  - Introduction of the team
  - Eye-contact
  - Pace of presentation
  - Language (jargon)
  - Use of notes
  - Confidence
  - Dress
  - Layout of slides and information on slides (not too text-heavy)

See rubric and mark allocations below (Annexure F).

## 8. Detailed WIL Requirements

### 8.1 Task 1

#### Project Plan Document

##### Structure of the Document

The layout of the document, including paragraphs, numbering, etc., must exactly match the specification below. Marks will be deducted for any deviations.

##### Cover Page

- Team number (if applicable)
- Team name
- Name and student number of each group member
- Name of chosen client and logo of the system

##### Index of Contents

Should contain the numbering of each section and figures/tables if applicable.

##### Documentation

In your document submission, include sections as specified below. Include a cover page and an index/content. As specified in Section 7 of the WIL Requirements. If you have developed anything and stored it on an external site (e.g. GitHub) then you must provide a link in your document so the lecturer can access those files for marking.

##### Introduction

This paragraph is directed at the company's management for which the system is developed. Therefore, a summary of the justification for the system must be provided. Give attention to the following aspects:

- The needs of the customer that the project should satisfy
- The goals of the project
- Cost constraints (budgets)
- Risks (if the project is not successful, late, over budget, etc.)

- Benefits for the customer if the project is successful

## Milestones and deliverables

Every project has milestones that represent important achievements in the development process. For example, when the system analysis is complete, a milestone has been reached. Each milestone is associated with a deliverable resulting from the activities that led to it. For the analysis milestone, the deliverable is the analysis document. Make a bullet list of the milestones and their associated deliverables.

## Work Breakdown Structure (WBS)

Draw up a table containing:

- The names of the tasks
- Description of each task
- Duration of each task
- Predecessor(s) if each task
- Team members responsible for each task
- Resources needed for each task

## Project schedule

Gantt Chart:

- Draw a Gantt chart for your project using any tool you'd like (Example: MS Project / Team Gantt)
- Interpret and explain the Gantt chart by describing the meanings of the different components of the chart for your project

## Risk Management

Using a table:

- Identify the risks to which your project may be exposed (e.g., team member leaves, no cooperation from sponsor/client, lack of technical expertise, team member does not contribute, running behind schedule, etc.)
- Determine the probability of each risk as Very Low, Low, Medium, High, Very High and the impact as Very Low, Low, Medium, High, Very High
- Indicate the proactive steps to be taken to handle each risk

## Technical Feasibility Issues

To develop a project, certain resources are needed; these can be grouped into hardware resources and software resources:

- Make a list of the hardware resources you need to develop your project
- Indicate if the hardware resources are available; if not, describe how you are going to solve the problem
- Make a list of the software resources you need
- Indicate if the software resources are available; if not, describe how you are going to solve the problem
- Note: Do not refer to resources you need to implement the system

## Economic Feasibility Issues

Project managers must make cost estimates if they want to complete projects within budget constraints. There are several ways in which the budget calculations can be done using Rough Order of Magnitude (ROM) calculation, budgetary estimate and definitive estimate.

- Draw up a table indicating each activity/task (use the tasks identified in the WBS structure)
- For each activity/task, state the team member(s) responsible for that task
- For each team member, indicate the time allocated for that task in terms of hours
- For each team member, indicate the tariff for that task in rand/hour
- Calculate the total budget for the effort (remember, effort is person-time) for the project by adding all the effort values of all the team members. (Do not calculate any other budget costs, such as hardware or software costs)
- Note: For converting sessions to hours, use the relationship: One session = 40 hours.

Format of the table:

| <b>Task Identification</b>      | <b>Team member(s) responsible</b> | <b>Time allocated per task per team member</b> | <b>Tariff per team member in Rand per hour</b> | <b>Cost per Task (time * tariff)</b> |
|---------------------------------|-----------------------------------|------------------------------------------------|------------------------------------------------|--------------------------------------|
| Task Name                       | Vusi                              | 30 hours                                       | 150                                            | 4500                                 |
| ::                              | ::                                | ::                                             | ::                                             | ::                                   |
| ::                              | ::                                | ::                                             | ::                                             | ::                                   |
| <b>Total budget for project</b> |                                   |                                                |                                                | <b>xxxxxxxx</b>                      |

## Team Members

- Identify the team leader (use a photograph)
- Identify the team members (use photographs)
- Give a description of each team members main responsibilities in the project
- Give a short CV of each team member (not longer than one page each)

## Appendix

Enter any additional information needed here. This is optional.

Do not forget any references: this includes a full reference list at the end of the document with matching in-text references throughout the document.

**Refer to the rubric for mark allocations (Annexure D – Task 1).**

## 8.2 Task 2

### Requirement Analysis Document

#### Documentation

In your document submission, include sections as specified below. Include a cover page and an index/content. If you have developed anything and stored it on an external site (e.g. GitHub) then you must provide a link in your document so the lecturer can access those files for marking.

#### Introduction / Problem Domain (System Analysis)

A study is made of the problem identified in the organisation selected. Use the introduction from the project plan document but give a more complete specification with more detail.

#### Solution Domain (Functional requirements and UML Use Case Diagrams)

A logical description of the functional requirements of the proposed system is given. You will use your UML background to draw a use case diagram of the system containing the following:

- The business system, divided into sub-systems if necessary
- The use cases actions
- The actors taking part (this may be human actors or mechanical system actors such as linking to other systems)
- The name of each entity (that is the system/sub-system use cases and actors in the diagram)

Format of the functional requirements table:

Example:

| <b>Participant<br/>(Active actor)</b> | <b>Function of the system</b> | <b>Participant<br/>(Passive actor)</b> |
|---------------------------------------|-------------------------------|----------------------------------------|
| Customer                              | Order groceries online        | Shop assistant                         |
| Shop assistant                        | Shops and delivers groceries  | Customer                               |
| Manager                               | Prepares a sales report       |                                        |

## Logical System Model

The Logical system is modelled by completing the following table. It must be accurate, as it is the heart of the system.

Format of the Logical System Model Table:

Example:

| GUI                    |                         | System Process (Method) | Entity relationship (Table) |
|------------------------|-------------------------|-------------------------|-----------------------------|
| Input                  | Output                  |                         |                             |
| Enter customer details |                         | Register a new customer | Customer table              |
| No input               | No output               | Calculate sales figures | Sales table                 |
| No input               | Sales report on printer | Print sales report      | Sales table                 |

## Class Diagrams

Identify the classes using the entity relationship column in the above System Model Table. Each Entity Relationship Table represents an entity that could be a potential UML class.

Format of Class Diagram Table:

| Name of entity (UML Class) | Properties of entity (UML Class)                                                                                          | Related to: |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------|-------------|
| Customer                   | <ul style="list-style-type: none"> <li>Name (string — 30 characters)</li> <li>Address (string — 60 characters)</li> </ul> | Account     |

Once the tables are complete, you will need to draw a domain class diagram. Consider the following:

- Draw diagrams indicating the relationships between the classes. Use a drawing tool such as [Draw.io](#) or any other tool to help prepare these diagrams.
- The standard UML class template contains the name, attributes and operations of the class. However, for a domain class diagram, this will include the name, attributes and relationships only.
- The following relationships between the classes need to be modelled if applicable:

- Associations
- Generalisations
- Aggregations
- Any other dependencies between classes/sub-classes/objects

## Appendix

Use this paragraph to add any information not specified in the previous paragraphs, but is worthwhile including in the document. Number each appendix: Appendix A, Appendix B, etc. Also, add an index of Appendices. You need to make sure all diagrams are visible and legible, consider adding smaller sections as appendices.

Do not forget any references: this includes a full reference list at the end of the document with matching in-text references throughout the document.

**Refer to the rubric below for mark allocations (Annexure D – Task 2).**

# System Design Document

## Documentation

In your document submission, include sections as specified below. Include a cover page and an index/content. As specified in Section 7 of the WIL Requirements.

## Introduction

Provide a description of your system (use information from previous documents)

## Logical Architectural Design – High-Level Architectural Design

- Indicate whether it is a three-level, two-level or flat system, the clients and the servers, the position of the database, etc.
- Indicate how the functional building blocks are divided between the components of the system (functions allocated to the clients, the server, etc.)
- Refer to the previous document and the system model table for details on the system Input/Output specification
- Also refer to the previous document for the functional requirements table for the system

## Logical Architectural Design – Low-Level Architectural Design

In the low-level design, the relationships between actors, functions and the database tables are indicated.

A low-level design is indicated in the following diagram:

The low-level design diagram consists of three parts:

- **Actors:** The actors refer to the actors identified in the previous document in the use-case diagrams
- **Functions:** The functionality of the system is modelled using use cases. State the function of each use case briefly. Arrows indicate any relationships between use cases
- **Database:** The database or table referred to in a use case must be indicated using a circle. The meaning of a database must be indicated using a note comment or a label

## Interactions with the User – Input Interactions

These interactions represent data controls used to read data into the system. This is the first reference to the GUI containing the complete interaction specification. In this document, the input interactions must be specified in detail.

There are two options you can follow:

**Option 1:** Give a summary of the input options.

Make a structured annotated list of all your inputs. The list must indicate the hierarchical relationship between the input menus.

For example:

| Main Menu             | Main Menu Item #1    | Main Menu Item #2    |
|-----------------------|----------------------|----------------------|
| 1 <sup>st</sup> Level | 1.1 Sub Menu 1       | 2.1 Sub Menu 2       |
|                       | 1.2 Sub Menu 2       | 2.2 Sub Menu 2       |
|                       | xxx                  | xxx                  |
| 2 <sup>nd</sup> Level | 1.1.1 Sub-sub-Menu 1 | 2.1.1 Sub-sub-Menu 2 |
|                       | Etc.                 | Etc.                 |

Example: You want to register a student at your college:

| Menu Level            | Student Personal Info | Student Study | Financial  |
|-----------------------|-----------------------|---------------|------------|
| 1 <sup>st</sup> Level | Biographical          | Year of Study | Financial  |
| 2 <sup>nd</sup> Level | Name                  | Degree        | Bank act   |
| 2 <sup>nd</sup> Level | Age                   | Subjects      | Saving act |
| 1 <sup>st</sup> Level | Address               | Subject #1    |            |
| 2 <sup>nd</sup> Level | Street                | Subject #2    |            |
| 2 <sup>nd</sup> Level | Post Box              | Subject #3    |            |
| 1 <sup>st</sup> Level | Contact               |               |            |
| 2 <sup>nd</sup> Level | Telephone             |               |            |
| 2 <sup>nd</sup> Level | Cell Phone            |               |            |

**Option 2:** Give a complete GUI definition.

Use C# or Java (or a similar visual tool like Figma) and design a complete GUI of all the input interactions. Include this design in your document.

**Note:** The input menus and forms play an important role in the identification of the attributes and services of the classes.

## Interactions with the User – Requests Interactions

These interactions represent all service requests put to the system and include requests for functional processing (scheduling, calculating statistics, etc.) and outputs in the form of screen displays (graphical representations) and printed reports. Request interactions refer to menus and output parameter forms used to specify the services (value-added) provided by the system.

Again, you have two options:

**Option 1:** Give a summary of the interactions.

Make a complete hierarchical list of all the interactions, as explained in the Input section.

**Option 2:** Give a complete GUI definition.

Specify the interactions by designing the GUI (menus and forms) using a visual tool (Visual Studio, Figma, or another similar tool) and include them in your document.

**Note:** In this document, non-functional aspects such as creating a file, defining passwords, and handling error messages are not covered. If you did not account for all interactions in your analysis document, you must now ensure that any interactions that were not considered are included in the design document. In your document, you must include paragraphs that describe the interactions.

## Database Design

Refer to your class diagram table to indicate entities and their relationships.

- Use these entities as building blocks in the design of your ERD data model
- Complete the following steps in designing your model
  - Identify all the entities in your database. This is possible by consulting your tables and the input and output menus of your GUI. Identify all the relationships between the entities and normalise them into 3NF
  - Use any tool (e.g., MS Word) to draw the ERD logical database tables
- As part of the relationship design, the keys related to each database table must be identified and specified. There are primary keys, secondary keys, foreign keys, composite keys, etc.
- The following database table layout can be used:

**Table Name:** <insert table name>

| <b>Primary key</b> | <b>Secondary keys</b>   |                         | <b>Data fields</b> |                 |                 |              |                 |
|--------------------|-------------------------|-------------------------|--------------------|-----------------|-----------------|--------------|-----------------|
|                    | <b>Secondary key #1</b> | <b>Secondary key #2</b> | <b>Field #1</b>    | <b>Field #2</b> | <b>Field #3</b> | <b>.....</b> | <b>Field #n</b> |
|                    |                         |                         |                    |                 |                 |              |                 |

Note: that the properties of an entity in the Class Diagram become the data fields of the database table.

- Draw a set of database tables (see below)
- Draw the relationship diagrams between the tables (see below)

Draw diagrams of the individual table's design, using the following numbering scheme:

**Database Table#1:** <Insert Table #1 here>

| <b>Primary key</b> | <b>Secondary keys</b>   |                         | <b>Data fields</b> |                 |                 |              |                 |
|--------------------|-------------------------|-------------------------|--------------------|-----------------|-----------------|--------------|-----------------|
|                    | <b>Secondary key #1</b> | <b>Secondary key #2</b> | <b>Field #1</b>    | <b>Field #2</b> | <b>Field #3</b> | <b>.....</b> | <b>Field #n</b> |
|                    |                         |                         |                    |                 |                 |              |                 |

**Database Table#2:** <Insert Table#2 here>

| <b>Primary key</b> | <b>Secondary keys</b>   |                         | <b>Data fields</b> |                 |                 |              |                 |
|--------------------|-------------------------|-------------------------|--------------------|-----------------|-----------------|--------------|-----------------|
|                    | <b>Secondary key #1</b> | <b>Secondary key #2</b> | <b>Field #1</b>    | <b>Field #2</b> | <b>Field #3</b> | <b>.....</b> | <b>Field #n</b> |
|                    |                         |                         |                    |                 |                 |              |                 |

And so on...

In each table, at least three fictitious, although realistic, values must be entered to serve as examples.

## Entity Relationship Database Design

Draw diagrams of the relationships between the tables using ERD diagrams. Number each table according to the following scheme:

**ERD diagram #1:** <Insert ERD diagram here>

**ERD diagram #2:** <Insert ERD diagram here>

You may use any tool you'd like to draw these, such as Draw.io.

## System Reports Design

As part of your database and ERD design, consider the reports your system must generate for the client. Identify what reports are needed, the data sources from your tables, and how the system will present these reports (screen display, printed, or PDF, etc.) Ensure that the design supports accurate and usable outputs.

## Appendix

Appendices are optional. It contains additional information important for the system. Number each appendix: Appendix A, Appendix B, etc.

Do not forget any references: include a full reference list at the end of the document, with matching in-text references throughout.

**Refer to the rubric below for mark allocations (Annexure D – Task 2).**

## 8.3 Project Report

### Final Hand In

#### Documentation

In your document submission, include sections as specified below. Include a cover page and an index/content. As specified in Section 7 of the WIL Requirements. If you have developed anything and stored it on an external site (e.g. GitHub) then you must provide a link in your documents so the lecturer can access those files for marking.

#### Combine All Previous Documents into ONE PDF Document

Your project plan, requirement analysis, and system design documents need to be combined into a single document for this final submission.

#### Project Plan Document

Based on your lecturer's feedback on your project plan document – Task 1 – make the necessary changes/improvements.

At the end of the project plan content, add a new sub-heading: “Changes Made to Project Plan Based on Lecturer Feedback”. And detail all changes made to the project plan document.

#### Requirement Analysis Document

Based on feedback from your lecturer on your requirement analysis document – Task 2 – make the necessary changes/improvements.

At the end of the requirement analysis content, add a new sub-heading: “Changes Made to Requirement Analysis Based on Lecturer Feedback”. And detail all changes made to the requirement analysis document.

#### System Design Document

Based on your lecturer's feedback on your system design document – Task 2 – make the necessary changes/improvements.

At the end of the system design content, add a new sub-heading: “Changes Made to System Design Based on Lecturer Feedback”. And detail all changes made to the system design document.

The final submission must also include a fully developed system prototype. At least it must be done in Figma, you could also do this in an IDE, which may benefit you for next semester. If this is done in an IDE, it must be connected to GitHub and the link provided in this final submission.

The prototype must reflect the system design, support user interactions, and demonstrate system functionality, including navigation, inputs, requests, and reports. No coding is required at this stage; only the design for each page is required. Screenshots of the prototype must be included in the document, along with a working link to the Figma and/or GitHub repository.

## Appendix

This is an individual submission. You will need to submit your ONE document containing all the above, ensuring any links (e.g., GitHub, Figma) have been added. Any screenshots if necessary. Annexure A, Annexure B, Annexure C and the PowerPoint presentation has been submitted. Do not forget references. **Refer to the rubric below for mark allocations (Annexure D – Project Report).**

## 9.WIL Mark Breakdown

| MILESTONE<br>(ASSESSMENT<br>POINT)      | SUBMISSION POINTS                                                                                                                                                                          | WEIGHT | MARK<br>BREAKDOWN |
|-----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|-------------------|
| Task 1                                  | 1. Project Plan                                                                                                                                                                            | 25%    | 100               |
| Task 2                                  | 1. Requirement Analysis                                                                                                                                                                    | 50%    | 100               |
|                                         | 2. System Design                                                                                                                                                                           |        | 100               |
| Project Report<br>(Final<br>Submission) | 1. A combination of the above documents into one document, with changes made from the lecturer's feedback.<br>2. Any links, screenshots and PowerPoint presentation needs to be submitted. | 25%    | 100               |
|                                         | 3. Annexures <ul style="list-style-type: none"> <li>Peer-Evaluations (30 marks)</li> <li>Self-Evaluation (50 marks)</li> <li>Presentation rubric (20 marks)</li> </ul>                     |        | 100               |
|                                         | 4. Presentation to lecturer, peers and possible clients.                                                                                                                                   |        | 100               |

## ANNEXURE A – Declaration of Authenticity

Plagiarism occurs in various forms. Ultimately, though, it refers to the use of another person's words, ideas, or images without acknowledging the source and using the required conventions. The IIE publishes a Quick Reference Guide (available on The IIE Library website) that provides more detailed guidance, but a brief description of plagiarism and referencing is included below for your reference. It is vital that you are familiar with this information and the Intellectual Integrity Policy before attempting any assignments.

The IIE respects the intellectual property of other people and requires its students to be familiar with the necessary referencing conventions. Please ensure that you seek assistance in this regard before submitting work if you are uncertain.

If you fail to acknowledge the work or ideas of others or do so inadequately this will be handled in terms of the Intellectual Integrity Policy (IIE023 – [available in the library]) and/or the Student Code of Conduct policy (IIE026)– depending on whether or not plagiarism and/or cheating (passing off the work of other people as your own by copying the work of other students or copying off the Internet or from another source) is suspected.

Your campus offers individual and group training on referencing conventions – please speak to your librarian or ADC/Campus co-ordinator in this regard.

### Reiteration of the Declaration you have signed:

1. I have been informed about the seriousness of acts of plagiarism.
2. I understand what plagiarism is.
3. I am aware that The Independent Institute of Education (IIE) has a policy regarding plagiarism and that it does not accept acts of plagiarism.
4. I am aware that the Intellectual Integrity Policy and the Student Code of Conduct prescribe the consequences of plagiarism.
5. I am aware that referencing guides are available in my student handbook or equivalent and in the library, and that following them is a requirement for successful completion of my programme.
6. I am aware that should I require support or assistance in using referencing guides to avoid plagiarism, I may speak to the lecturers, the librarian, or the campus ADC/ Campus Co-ordinator for clarification.
7. I am aware of the consequences of plagiarism.

Please ask for assistance prior to submitting work if you are at all unsure.

*\*\*Attach the declaration to your report*

## Declaration of authenticity

I, \_\_\_\_\_ ID Number, \_\_\_\_\_ hereby  
declare that this portfolio, and any evidence included therein, contains my own  
independent work and that I have not received help from other groups.

I confirm that we have not committed plagiarism in the accomplishment of this work,  
nor have I falsified and/or invented experimental data.

I accept the academic penalties that may be imposed for violations of the above.

# ANNEXURE B - Peer Evaluation

(NOT TO BE SHARED WITH TEAM MEMBERS)

*\*\*Please complete and include the peer-evaluation reports when submitting your final PoE.*

**GROUP NAME/NUMBER:** ..... **DATE:** .....

Please rate each of your team members using the details in the assessment criteria descriptions provided. Marks received from each member of the team will be added up and then averaged for each member's individual mark. Complete a separate evaluation form for each team member.

| Name of student being evaluated:                                        |                                                                              | Never    | Seldom   | Frequently | Always     |
|-------------------------------------------------------------------------|------------------------------------------------------------------------------|----------|----------|------------|------------|
| <div style="border: 1px solid black; height: 30px; width: 100%;"></div> |                                                                              |          |          |            |            |
|                                                                         |                                                                              | <b>0</b> | <b>1</b> | <b>2</b>   | <b>3</b>   |
| <b>The student's personal work</b>                                      |                                                                              |          |          |            |            |
| 1.                                                                      | The student contributed good ideas that added value to the project.          |          |          |            |            |
| 2.                                                                      | The student performed their tasks in line with what was expected of them.    |          |          |            |            |
| 3.                                                                      | The student produced high quality work.                                      |          |          |            |            |
| 4.                                                                      | The student managed their own time well and met deadlines.                   |          |          |            |            |
| 5.                                                                      | The student connected their own learning and skills to a real-world problem. |          |          |            |            |
| <b>The student's work as part of a team (when relevant)</b>             |                                                                              |          |          |            |            |
| 6.                                                                      | The student accepted responsibility for a fair portion of the tasks.         |          |          |            |            |
| 7.                                                                      | The student was an enthusiastic member of my team.                           |          |          |            |            |
| 8.                                                                      | The student helped others to be successful.                                  |          |          |            |            |
| 9.                                                                      | The student worked well with other members of the team.                      |          |          |            |            |
| 10.                                                                     | The student showcased respect and dignity towards all members of the team.   |          |          |            |            |
| <b>TOTAL:</b>                                                           |                                                                              |          |          |            | <b>/30</b> |

## ANNEXURE C - Self-Reflective Report

*\*\*Please complete and include this self-reflective report when submitting your final PoE.*

**Using the reporting structure below, write a self-reflection report on your experience explaining how and what you learnt doing the WIL:**

### Introduction

Write an introductory paragraph in which you briefly outline your understanding of the purpose and value of WIL.

### Skills Learnt

Identify the skills you have learnt. State how you used/were expected to use each skill during your WIL. Consider skills under each of the following three categories and report on each:

- Industry specific practices, e.g. report writing, planning skills, compilation of charts/graphs etc.
- Interpersonal communication skills, e.g. brainstorming sessions, feedback sessions, staff meetings or briefing and debriefing sessions, etc.
- Management skills, e.g. time management to meet deadlines, crisis management to solve unexpected problems, etc.

### Role in the team

Describe the team dynamic during your WIL and whom you reported to and with whom you were in a team with. Comment on your role in the team with regard to all of the following points:

Leadership responsibilities and being provided instruction.

- Your contribution to team success.
- The group dynamic and your contribution to the group/team.
- Dealing with concerns, complaints, queries and conflict.

### Research, technology and the presentation of information

Finding information that is both relevant and useful is a much-needed skill in WIL.

- Describe one (1) or two (2) scenarios in which you were expected to find information for a task or duty that you had to complete. This can be related to online research, finding client or supplier contact information, or looking through files and databases to find relevant data.
- Where did you find the information you needed to do this work?
- What technology did you use?
- How did you have to present the information you found?

**Task 2 consists of two documents: Requirement Analysis and System Design. Each document is marked out of 100 and contributes equally (25% each) toward Task 2. The final Task 2 mark is calculated by averaging the two marks.**

**Overall Task 2 Mark = (Requirement Analysis Mark + System Design Mark) / 2**

## Assessment Sheet (Marking Rubric) – Project Report

This final submission consists of the document mark, annexure marks and presentation rubric marks. Each of these sections is out of 100 and contributes toward the 25% weight.

**Project Report Mark = (Document Mark + (Peer + Self + Individual Presentation Mark) + Group Presentation Mark) / 3**

## ANNEXURE E – Presentation Rubric

This is the rubric your lecturer will use to mark everyone in the group presentation. Please refer to this when preparing your presentation.

# ANNEXURE G - Professional Conduct in the Workplace

## 1. Introduction

This learning unit is designed to highlight transferable skills which are necessary to succeed in the 21<sup>st</sup> century workplace. These skills include teamwork, critical thinking, high-level problem-solving, communication, self-management, and career readiness.

After completing this learning unit, you should be able to:

- Conduct yourself professionally in the workplace;
- Apply appropriate interpersonal skills in a professional context;
- Develop yourself and promote your career.

There are short videos and links embedded throughout the learning unit directing you to more readings on important topics. These are designed to give you a deeper understanding of some of the terms and terminology that you will encounter in this learning unit, as well as the circumstances that you may encounter as you enter the workplace.

## 2. Progressing from student-life to work-life

In the South African economy, employment opportunities are available in a range of very different organisations such as local government, public administration, the banking industry, private business, non-profit organisations, and small, medium, and micro-sized enterprises (SMME). Each of these potential employers have their own rules, expectations and organisational cultures. This means that you, as a new employee, would need to adapt and fit into this new environment.

### **The Future: How to create opportunities from change**

Source

Run time: 1:50

As you move into the workplace, it is your responsibility to manage yourself. When you were at school, somebody actively looked after you (your parents and teachers); at university you were encouraged to explore your identities and given more freedom of choice in your lives. However, you still had parents and lecturers who provided support and guided you.

Once you enter the world of work, you are expected to behave in certain ways and be professional, efficient and effective in your role as an employee. Any actions you choose to follow will have consequences (both good and bad). It is your responsibility to ensure you follow any instructions from your line managers and take control of your own performance and reputation.

Your first line of responsibility before moving into the workplace will be to secure interviews for yourself. Compile your curriculum vitae (CV) and include some specific information that would showcase your abilities and your educational achievements. Some information is considered irrelevant and should be excluded from your CV for various reasons. There are many CV templates on the internet that you can choose from. If you are applying for jobs that are predominantly in a corporate environment, then your CV should be simple and reflect the formality of the company. However, if you will be applying for jobs with an arty or creative edge then your CV can be much more elaborate and colourful.

You could hear of potential jobs through various channels, such as:

- Word of mouth – someone you know may hear about a vacancy and pass on the information.
- Media – newspapers and the internet have thousands of jobs advertised.
- LinkedIn – create your own professional profile and upload your CV. Make connections and network in your chosen field.
- Recruitment companies.

It is important to be professional in your job search and this includes professional email addresses. Email addresses which do not portray you as an employee with integrity should not be used. An email address such as IwantToParty@gmail.com or tequila@yahoo.com will not give a good first impression of you and may be considered junk mail and never be seen by the person who the email is addressed to. Choose a professional looking email address e.g. Vusi.Molefe@gmail.com.

Each year you will have a meeting with your line manager or someone who manages your performance. This is normally called a Performance Review and will have a number of Key Performance Areas (KPA's) which your performance is measured against. You will be notified of these when you enter the workplace and relate to the job profile that you work in. These are reviewed annually as you grow in your job and take on more responsibility. Your salary increases will most probably be based on your KPA score.

One of the most important areas for you to attend to is meeting deadlines. Businesses function on the timeous delivery of their products and services and in most cases the deadlines cannot be extended. Think about your salary, you expect to be paid at the same time every month. What would happen if someone missed a deadline and you were paid a week later or even worse, never received it? Often the work you will be required to complete by a deadline needs to move on to another person or department

and if you miss your deadline then you are holding up the process and putting those other employees under pressure to meet their deadlines.

### 3. Behaviour in the workplace

Your new employer would expect you to conduct yourself professionally and ethically from the first day.

#### Professionalism at the workplace

Source

Run time: 1:44

Most employers will have an induction programme for new employees, where you will get an introduction into the sections and operations of your new environment. It is a good idea to be prepared and make the most of learning about your new work environment during the induction. But, there is far more that you would need to do and learn. This will help you to understand what is expected of you and what is seen as appropriate behaviour. When you start working in a new position, make sure you know what the organisation's culture is.

The more you understand your new work environment, the sooner you will be able to fit right in.

Source

These key skills are also referred to as interpersonal skills or soft skills in the workplace. Let us look a bit closer at each of these key skills:

### Communication skills

Communication in the workplace must always be professional. It can never be on the same informal level as at home or with friends. If your office environment has a policy that English is the language of business, adhere to it. Professional communication at work includes language proficiency, reading, writing, problem-solving, and the use of information technologies.

Both written and oral communication in the workplace must always be professional. There are many books and articles written on the dos and don'ts of office communication. Here are some of the most important ones:

#### Communication Dos and Don'ts:

| DO                                                                                                                                                        | DON'T                                                                              |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|
| Develop your " <u>business vocabulary</u> ":                                                                                                              | Never use poor grammar or slang.                                                   |
| Texting in the workplace should only be done when it is absolutely necessary. This article on <u>texting language</u> . May be helpful on how to do this. | Never use the abbreviated language that you use with your friends on social media. |

|                                                                                                                                                 |                                                                                                                                                                                 |
|-------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Listen to the presentations of your managers and research terms and terminology pertaining to your environment with which you are not familiar. | Refrain from using <u>inappropriate phrases or any form of sexist, racist or heteronormative language.</u>                                                                      |
| Make use of a <u>spelling and grammar checker</u> when typing emails, reports and letters.                                                      | Do not let anger or frustration reflect in the tone of your verbal or written communication. Do not use CAPITAL LETTERS, bold font, slang or emoticons to indicate frustration. |
| Use the correct letterheads, stationery and templates for official business communication and refrain from using them for personal use.         | Never gossip or constantly complain about trivial matters or use abrasive language.                                                                                             |

But what about nonverbal communication in the workplace? Actions such as a facial expression, eye contact, gestures and posture communicate far more than you could realise. It could even include the way you dress. Together with verbal communication, nonverbal communication may be used to as important cues to strengthen the message. As a new employee you should be aware how your nonverbal cues can be interpreted.

Consider the following scenario:

Your manager asks you to compile a report and then present this report at a meeting. This task provides you with a number of opportunities to showcase your abilities, work ethic, and performance. What choices would you need to make?

There are many considerations, but those listed below are some of the important ones:

- Communication:
  - The language used in your report. Is it suitable for the audience you will be presenting to?
  - Verbal and non-verbal communication skills.
- Appearance:
  - The clothes you will be wearing to do the presentation. This should again be appropriate for the audience and the occasion.
  - It is not advisable to chew gum in an office environment if you are expected to have face-to-face meetings with people or do presentations.

If you are unsure of what you are expected to do, then ask for assistance. Your manager would rather you do this than have a presentation which is not fit for purpose or lacks vital information.

## Meetings

Conducting yourself professionally and actively participating in business meetings would require a good understanding of the different types of meetings, their purpose and structure. The business environment generally has regular meetings for a range of business reasons.

Some examples are:

- Staff meetings;
- Product meetings;
- Stakeholder meetings;
- Committee meetings.

Communication in these meetings follows strict meeting protocols. It is also a good idea to take notes during meetings, especially if they are used to allocate work and responsibilities.

## Telephone Etiquette

You will be required to be professional in your telephone communication. It is good business practice to state your name when answering your phone. Be polite and take notes if you are being requested to do tasks or pass on a message. Getting the message communicated correctly is an important function in the workplace. Knowledge of Business phone etiquette will assist you in dealing with clients, suppliers and associates in a professional way that will promote both your image and your organisation's reputation.

Another important consideration is your phone's ringtone. Keep it simple and professional.

## Teamwork and group work

At work, you will be required to work with people, either formally in teams or informally by sharing office environments. Your success will depend on cooperation with individuals and groups. You need a special set of skills when working on a one-on-one situation or in teams. This will require people skills:

**Creating Value through People Skills (Source)**

To be a good team member, you would need to:

- Build a good rapport with other team members;
- Improve your listening skills;
- Develop speaking and presentation skills;
- Communicate to different audiences;
- Respect diversity;

- Give and receive criticism more effectively without being offensive or taking the criticism personally;
- Be assertive and diligent;
- Resolve conflict and deal with difficult people;
- Develop negotiation skills;
- Build leadership skills.

Many of these skills will be developed over time as you build experience in the workplace and receive further training.

## **Office politics and social protocols**

All offices and organisations will experience office politics. There are many reasons why most work environments go through stages where office politics can cause problems. There are many reasons why these problems may surface and why this should be carefully managed.

Some of the reasons include:

- Employees aspiring to be noticed;
- Employees overstep and cross boundaries and their authority;
- Employees lack supervision and control in the workplace;
- Gossip at work leads to poor office politics;
- Jealous colleagues (professional jealousy) or people who perceive others as a threat.

As a professional, you are responsible for managing difficult situations. How can professional jealousy be prevented?

You will be spending many hours at work. It is, therefore, important that these situations be handled with great care and professionalism to prevent conflict and to keep office relationships professional.

Dealing with differences in opinion and conflict is an important life skill to have, which can be effectively used in the workplace. It is important to regulate your emotions and not take other individuals' opinions personally. Do not email or phone anyone until you have thought through your response carefully and remove all emotions out of your communication. If you do not, you run the risk of inflaming the situation and coming across as volatile and unprofessional.

## **Professional networking**

Networking with co-workers in the organisation and with professional bodies helps you to grow and develop your skills and career and build communities of practice. Social networking, such as creating professional profiles on LinkedIn, helps to open up opportunities, create awareness and build your professional portfolio.

## 4. Ethics, trust, honesty and integrity

Ethical behaviour means you are doing the right thing for the right reasons. e.g. not taking home office stationery, using the company's internet connectivity for personal use, gossiping about fellow employees, harassment and discrimination of any kind. There are various offences you could commit in the workplace for which you could possibly be fired. Many are related to ethics, such as stealing, revealing confidential information, insubordination, dereliction of duty, harassment and discrimination, etc.

You want to trust your employer and believe that they will always have your best interests at heart. Your professional conduct will create a mutual trust relationship at the organisation. This requires ethical behaviour, knowing what is right and acting accordingly. Ethics is doing the right thing even when no one is watching.

The following are some pointers that will guide you towards creating this trust relationship:

- Never exaggerate on a Curriculum Vitae or add skills and qualifications that you do not have.
- Be punctual for meetings and appointments.
- Meet deadlines.
- Do what you said you would do and communicate immediately if you are not able to honour your commitments.
- Conform to the organisational culture and stick to the "rules".
- Be open and honest with your colleagues and manager if something goes wrong. Do not lie.
- Respect your organisation, their resources and management.
- Sensitive information must be kept confidential. This includes any information about your salary or other forms of remuneration. You may not discuss with other employees how much you earn.
- Do not use the organisation's resources such as stationery, internet connectivity and telephones for personal purposes.

## 5. Managing professional spaces and appearances

One of the biggest adjustments that is required when bridging the stage of being an informal student to a professional in the workplace is the dress code. Would you trust a Bank Manager who wears dirty shoes, chews gum and uses informal language or slang? You must dress for success – you must look the part if you want to succeed. Dressing appropriately will boost your self-confidence. Read this article for more information: [20 Personal Appearances Tips for the Workplace.](#)

In open office environments, it is particularly important to consider your colleagues in the shared space. These are some of the areas that can cause conflict:

- Noise - Do not talk too loudly as you may distract your colleagues from their work. It is very difficult to concentrate when there is too much noise.
- Temperature - Do not adjust the temperature of the air conditioner. These are normally set at a standard temperature which is considered comfortable for the majority of people. This is around 23 degrees. If you feel too hot or cold, then plan to adjust your personal space (an extra jersey, lap blanket, or a desk fan) to your comfort level.
- Neatness - Keep your office area neat and organised. You may be permitted to personalise your area with photographs or other small items. Keep these to the minimum so they do not intrude on your workspace. All décor must be appropriate and portray a professional image.
- Smells – Keep the smelly food for home. Your colleagues may not appreciate your tuna or garlic-laced lunch.

## 6. Behaviour and conduct outside of working hours

Your conduct outside of office hours is as important as your conduct during working hours. This is also true for your online behaviour. Recruiters and companies often scrutinise online social media and behaviour when they decide on the suitability of a candidate. If you are irresponsible and post inappropriate pictures or comments, it may cost you your job.

The following are actions on social media that may have dire consequences for you as an employee:

- Making negative comments about your manager, your colleagues or the organisation;
- Making derogatory comments or commenting on controversial social media posts;
- Mentioning salaries, complaining about your salary or new job offers;
- Sharing photos of wild parties, alcohol consumption and nudity;
- Making threats online, even jokingly.

The conduct and standards expected for online communication is often referred to as Netiquette.

## 7. Contracts and legal matters

When you start working either permanently, as an intern or as a contract employee, you need to know what your responsibilities and rights are in advance. The very first document you will be expected to sign will be your conditions of service for employment. These are normally standard for colleagues in the same or similar positions but could have been customised to include additional responsibilities as the

job requires. Read your contracts carefully before signing them, as by signing them, you acknowledge that you are accepting the tasks specified. Ask if you do not understand certain clauses and information.

## **8. In Closing**

It is better to be well prepared and have the appropriate expectations when you enter the job market. In this learning unit we introduced some areas that will assist you in this preparation. It is also important to realise that we live in a fast-paced world where technology, information and situations constantly change.

In summary, make sure that you always stay informed and well-prepared, keep records and conduct yourself in a way that will grow your opportunities to your long-term advantage.
